### **Adding Additional Control Type to Existing Crane Certification**

Adding an additional control type via practical exam, during the original certification time frame shall be allowed. The expiration date would align with the original crane certification.

**Example:** If an individual received an EICA stationary control crane certification in 2018, they would be allowed to take the rotating control practical exam in 2020 to receive the EICA rotating control crane certification. The expiration date on the rotating control crane certification would match up with the stationary control certification of 2023. The 14-month time frame policy would not apply to add an additional control type certification to an existing crane certification.
